

Information theory

Concept of information (through an example)

Information content of data streams, information rate

Entropy and information

Concept of information (through an example)

Intuitive concept:

"informare" (Lat.): „to give form to the mind“, or to teach, instruct somebody

Thus: „We can only change our minds, when we receive **information**.“

Or:

„a type of input to an organism or designed device“: Ecology, sensory input
(Smell of food → movement of animal)

Or:

„information is any type of pattern that influences
the formation or transformation of other patterns.“
(RNA sequence → Protein structure)

Transmitting information – information content

Event and information:

What happened?

„Information content“ of events:

- It is light traffic this morning
- It will rain tomorrow.
- I have won the lottery!

How can we encode information?

Transmitting information – information **coding**

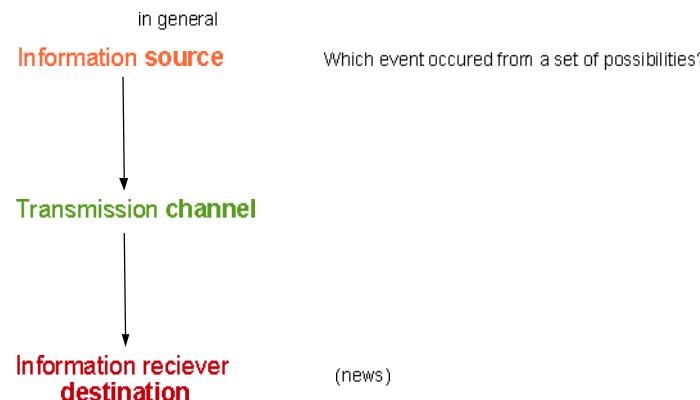

in general

Information source

Which event occurred from a set of possibilities?

Information receiver destination
(news)

Transmitting information – information **coding**

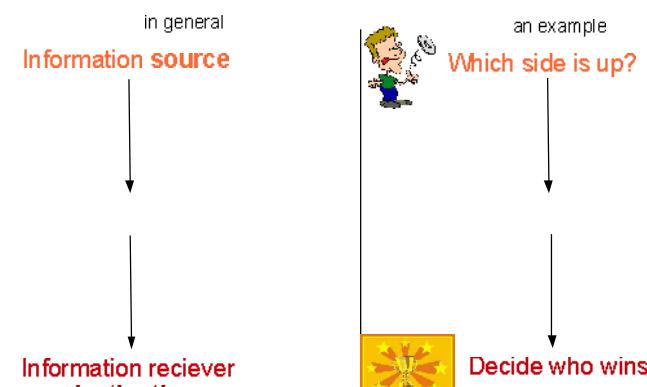

Transmitting information – information **coding**

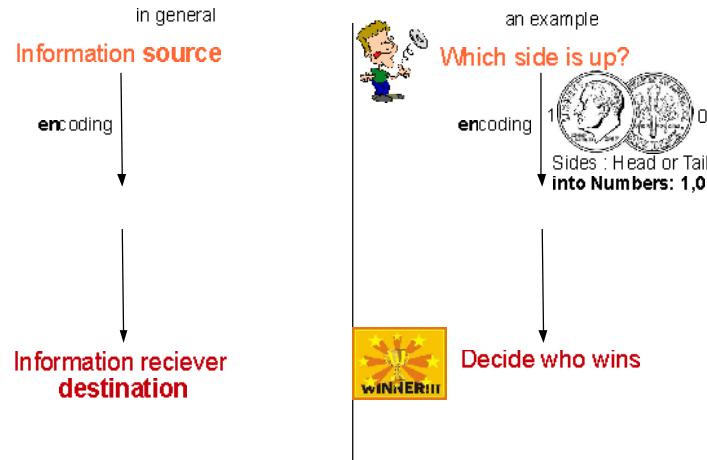

Transmitting information – information **coding**

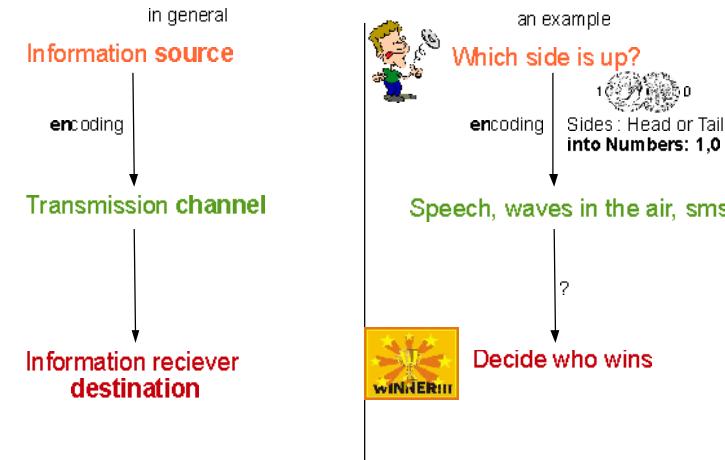

Transmitting information – information **coding**

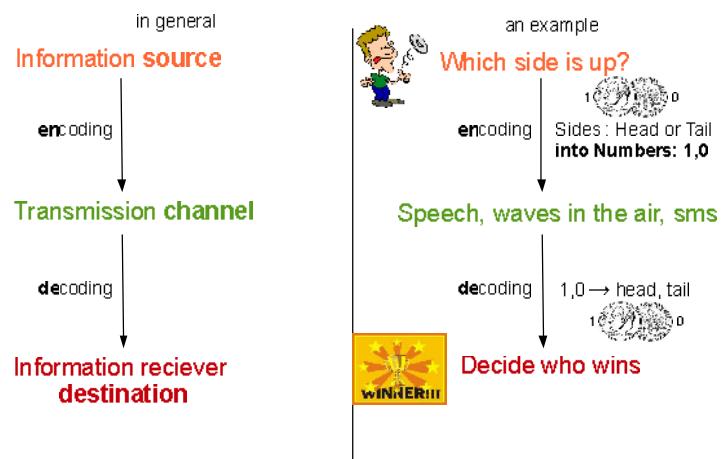

Transmitting information – information **coding**

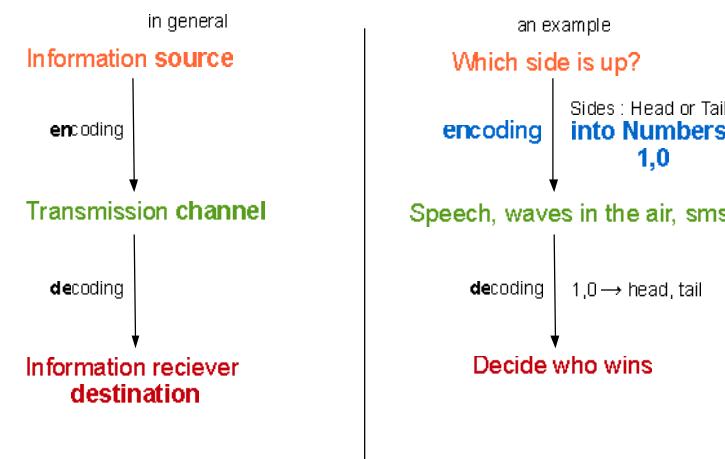

Transmitting information – information **coding**

Transmitting information – information **coding**

Transmitting information – information **coding**

Transmitting information – *digital coding*

Event	Number	Digital code
↓	1	1
↑	0	0

Event	Number	Digital code
↓↓	1	001
↓↑	2	010
↑↓	3	011
↑↑	4	100
↓↓	5	101
↑↑	6	110

Transmitting information – *digital coding*

How many **bits** we need?

Bit: **binary digit**

0 or 1

2-base numbers: example: $101_2 = 1 \cdot 2^2 + 0 \cdot 2^1 + 1 \cdot 2^0 = 5_{10}$

bit = „binary digit”

Transmitting information – *digital coding*

How many bits we need?	Event	Number	Digital code	Bits needed
↓	↓↓	1	1	1
↑	↑↑	0	0	1
0 or 1				

Event	Number	Digital code	Bits needed
↓↓	1	001	3
↓↑	2	010	3
↑↓	3	011	3
↑↑	4	100	3
↓↓	5	101	3
↑↑	6	110	3

Transmitting information – *coding efficiency*

Event	Number	Digital code	Bits needed	Maximum number of events
↓↓	1	1	1	2
↑↑	0	0	1	2

Event	Number	Digital code	Bits needed
↓↓	1	001	3
↓↑	2	010	3
↑↓	3	011	3
↑↑	4	100	3
↓↓	5	101	3
↑↑	6	110	3
	7	111	3
	0	000	3

Here we only have 6 events,
but could encode 8 in 3 bits!

Transmitting information – coding **efficiency**

Event	Number	Digital code	Bits needed	Maximum number of events
	1	001		
	2	010		
	3	011		
	4	100	3	8
	5	101		
	6	110		
	7	111		
	0	000		

Here we only have 6 events, but could encode 8 in 3 bits!

Transmitting information – coding **efficiency**

Event	Number	Digital code	Bits needed	Maximum number of events
	1	001		
	2	010		
	3	011		
	4	100	3	8
	5	101		
	6	110		
	7	111		
	0	000		

Here we only have 6 events, but could encode 8 in 3 bits!

A better encoding:

$\{\text{XXX}_1\}$ group 3 events together
Classic coding
 3×3 bits = **9** bits

A better encoding:

$\{\text{XXX}_1\}$ group 3 events together : number of possibilities = $6^3 = 216$
Classic coding
 3×3 bits = **9** bits $256 = 2^8$
It is possible to encode 3 events in **8** bits
1 bit less!

Transmitting information – information content

Information content = how many bits do we *minimally* need to encode

(This also gives the encoding efficiency limit)

Transmitting information – information content

Information content = how many bits do we *minimally* need to encode

(This also gives the encoding efficiency limit)

How does this connect with intuitive information content?

- I have tossed a dime. Head or Tail?
- It is light traffic this morning
- It will rain tomorrow.
- I have won the lottery!

Transmitting information – information content

Information content = how many bits do we minimally need to encode
 (This also gives the encoding efficiency limit)

How does this connect with intuitive information content?

	p $\frac{1}{2}$	q $\frac{1}{2}$
-I have tossed a dime. Head or Tail?	$\frac{1}{2}$	$\frac{1}{2}$
-It is light traffic this morning	$\frac{1}{4}$	$\frac{3}{4}$
-It will rain tomorrow.	1%	99%
-I have won the lottery!	1/13,983,816	0.999....

Transmitting information – information content

Information content = how many bits do we minimally need to encode
 (This also gives the encoding efficiency limit)

How does this connect with intuitive information content?

	p $\frac{1}{2}$	q $\frac{1}{2}$	No idea
-I have tossed a dime. Head or Tail?	$\frac{1}{2}$	$\frac{1}{2}$	
-It is light traffic this morning	$\frac{1}{4}$	$\frac{3}{4}$	
-It will rain tomorrow.	1%	99%	
-I have won the lottery!	1/13,983,816	0.999....	Probably no win

Transmitting information – information content

Information content = how many bits do we minimally need to encode
 (This also gives the encoding efficiency limit)

How does this connect with intuitive information content?

	p $\frac{1}{2}$	q $\frac{1}{2}$	No idea
-I have tossed a dime. Head or Tail?	$\frac{1}{2}$	$\frac{1}{2}$	
-It is light traffic this morning	$\frac{1}{4}$	$\frac{3}{4}$	
-It will rain tomorrow.	1%	99%	
-I have won the lottery!	1/13,983,816	0.999....	Probably no win

Gained information is inverse proportional to the probability (p)

Transmitting information – measure of information

Fair P probability code example bits needed p*(number of bits needed)

	1/6	0,17	000	3	0,5
	1/6	0,17	001	3	0,5
	1/6	0,17	010	3	0,5
	1/6	0,17	011	3	0,5
	1/6	0,17	100	3	0,5
	1/6	0,17	101	3	0,5

Expected number of bits needed:

3

Loaded P We can encode more efficiently here:

	1/2	0,5	0	1	0,5
	1/4	0,25	10	2	0,5
	1/8	0,13	110	3	0,38
	1/16	0,06	1110	4	0,25
	1/32	0,03	11110	5	0,16
	1/32	0,03	11111	5	0,16

Expected number of bits needed:

1,94

Transmitting information – measure of information

Fair	P	probability	code example	bits needed	$p^*(\text{number of bits needed})$
	1/6	0,17	UUU	3	0,5
	1/6	0,17	UU1	3	0,5
	1/6	0,17	U1U	3	0,5 Here we do NOT Expect anything
	1/6	0,17	011	3	0,5
	1/6	0,17	100	3	0,5 Maximal uncertainty
	1/6	0,17	101	3	0,5

Expected number of bits needed:

3

Loaded **Gained information is proportional to the number of bits needed**

	1/2	0,5	U	1	0,5 Here we expect
	1/4	0,25	1U	2	0,5 „one“ (most probable)
	1/8	0,13	110	3	0,38
	1/16	0,06	111U	4	0,25
	1/32	0,03	11110	5	0,16
	1/32	0,03	11111	5	0,16

Expected number of bits needed:

1,94

Here the information content is less.

On average we learn less

Transmitting information – measure of information

How should be information content **mathematically** specified? (Shannon 1948)

1.: H should be continuous in the p_i (small change in $p_i \rightarrow$ small change in H)

2.: Unlikely events carry a high information content:

H should be in some way inverse proportional to p

If all the p_i are equal, ($p_i = 1/n$)

then H should be a monotonic increasing function of n.

With equally likely events there is more choice, or uncertainty, when there are more possible events.

3.: Branching Choices:

If a choice can be broken down into two successive choices, the original H should be the weighted sum of the individual values of H.

$$H\left(\frac{1}{2}, \frac{1}{3}, \frac{1}{6}\right) = H\left(\frac{1}{2}, \frac{1}{2}\right) + \frac{1}{2} \cdot H\left(\frac{2}{3}, \frac{1}{3}\right)$$

Transmitting information – measure of information

Shannon: define measure as: $H = p \cdot \log_2\left(\frac{1}{p}\right)$

\log_2 : 2-base logarithm

Examples:

$$\log_2(2) = 1$$

$$\log_2(4) = 2$$

$$\log_2(8) = 3$$

Transmitting information – measure of information

Shannon $H = p \cdot \log_2\left(\frac{1}{p}\right)$ [bit]

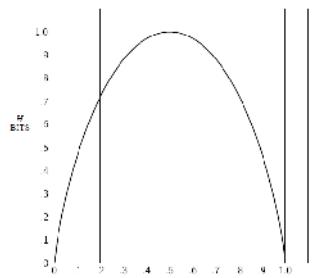

If we have multiple events in the set, then it is a sum for every possible event:

$$H = \sum_i p_i \cdot \log_2\left(\frac{1}{p_i}\right) = \sum_i -p_i \cdot \log_2 p_i$$

other log-bases:
 $\log_n(n)$: [nat]
 $\log_b(b)$: [ben]

measure of information - entropy

Dime tossing

$$H = \sum_i -p_i \log_2 p_i = -p \log_2 p - q \log_2 q = -p \log_2 p - (1-p) \log_2 (1-p)$$

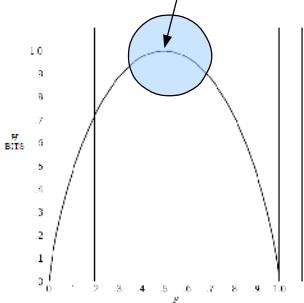

measure of information - entropy

Dime tossing

Fair dime: $p = \frac{1}{2}$

no expectations
maximal uncertainty

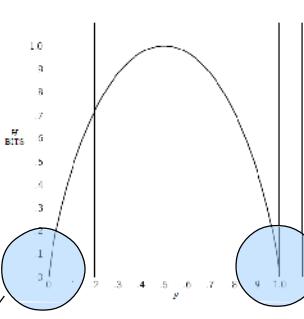

$$H = \sum_i -p_i \log_2 p_i = -p \log_2 p - q \log_2 q = -p \log_2 p - (1-p) \log_2 (1-p)$$

measure of information - entropy

Dime tossing

Fair dime: $p = \frac{1}{2}$
no expectations
maximal uncertainty

H has another name: **Shannon-entropy**

H has a **maximum** when we know nothing in advance (all p-s are equal, $p = 1/n$)

Expected outcomes are maximized: each state is equally probable

Physical entropy (S) has a maximum if the number of microstates is maximal.

measure of information - entropy

Dime tossing

H has another name: **Shannon-entropy**

H vanishes ONLY if we are absolutely certain of the outcome: $p=0$ or $p=1$

Physical entropy (S) vanishes ONLY if there is exactly 1 microstate

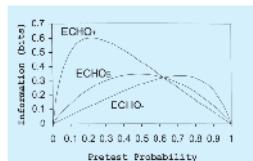

Examples of usage in medicine

Bayes-theorem based methods:

The amount of information gained by performing a diagnostic test can be quantified by calculating the relative entropy between the posttest and pretest probability distributions

Application:

- Diagnostic tests
- expert systems

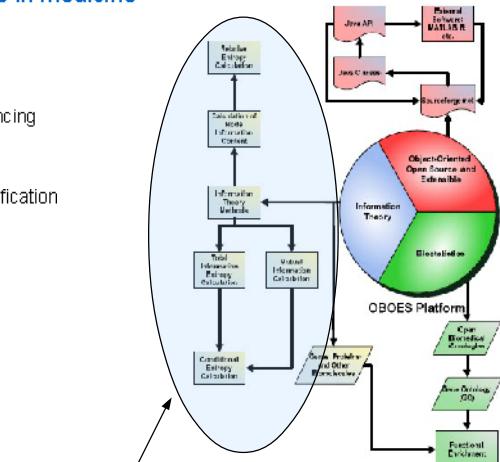

a_i : pretest probability
 b_i : post test probability

$$D(b_i|a_i) = \sum_{i=1}^n b_i \log_2(b_i/a_i)$$

Testing Situation	Pretest Probability of Disease	Test Operating Characteristics	Test Result	Posttest Probability of Disease	Information Gained
Breast cancer screening with mammography	0.001	0.75/0.15	Positive	0.11	0.25 bits
			Negative	0.0003	0.0001 bits
Mammography given palpable breast mass	0.2	0.80/0.00	Positive	0.67	0.44 bits
			Negative	0.05	0.13 bits
Screening for HIV with antibody test	0.001	0.99/0.000	Positive	0.03	2.4 bits
			Negative	0.00001	0.0001 bits
Presence of luminal exudate in dog roseus infection with group A streptococci	0.1	0.15/0.85	Positive	0.24	0.11 bits
			Negative	0.07	0.01 bits
Colon cancer screening by fecal occult blood testing	0.005	0.10/0.90	Positive	0.02	0.02 bits
			Negative	0.0003	0.0005 bits

Examples of usage in medicine

Gene technology sequencing
Gene interactions
Gene and function identification
Proteome mapping
Systems biology

Information entropy and physical entropy

Extension material: information entropy and physical entropy

„in an isolated system, entropy never decreases.“ Second Law of Thermodynamics

The Maxwell demon

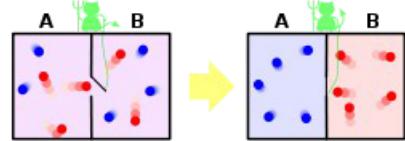

Temperature of A **decreases**, B **increases** → Violation of the Second Law ?

Information entropy and physical entropy

„in an isolated system, entropy never decreases.“ Second Law of Thermodynamics

The Maxwell demon

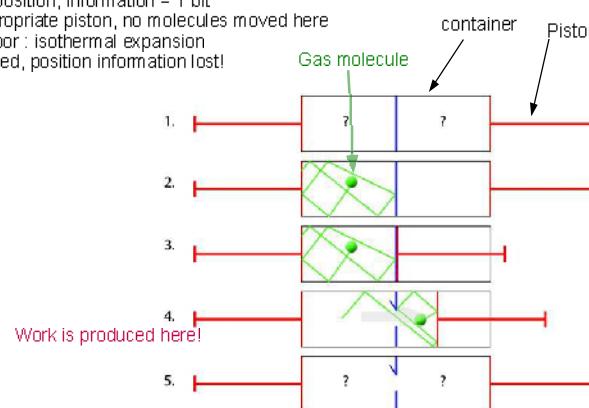

Temperature of A **decreases**, B **increases** → Violation of Law II. ?

Solution: NO, since the demon interacts with the system, it must be considered.
The demon acquires **information**, and this changes its state!

Information entropy and physical entropy

- 1.: molecule's position unknown
- 2.: measure position, information = 1 bit
- 3.: move appropriate piston, no molecules moved here
- 4.: release door: isothermal expansion
- 5.: door opened, position information lost!

Information entropy and physical entropy

- 1.: molecule's position unknown
- 2.: measure position, information = 1 bit
- 3.: move appropriate piston, no molecules moved here
- 4.: release door: isothermal expansion**
- 5.: door opened, position information lost!

Isothermal expansion:

$$W_{A \rightarrow B} = NkT \ln\left(\frac{V_A}{V_B}\right)$$

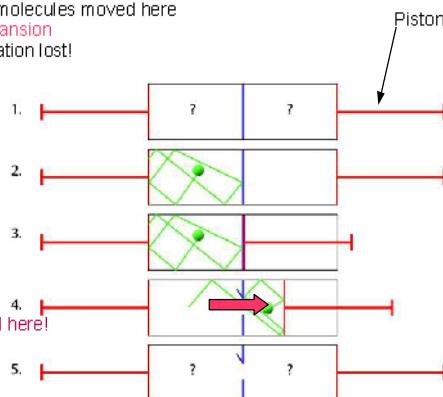

In this case:

$$N=1$$

$$\frac{V_A}{V_B} = 2$$

Hence

$$W = kT \ln(2) \text{ Work is produced here!}$$

Information entropy and physical entropy

- 1.: molecule's position unknown
- 2.: measure position, information = 1 bit
- 3.: move appropriate piston, no molecules moved here
- 4.: release door: isothermal expansion**
- 5.: **door opened, position information lost!**

Isothermal expansion:

$$W_{A \rightarrow B} = NkT \ln\left(\frac{V_A}{V_B}\right)$$

In this case:

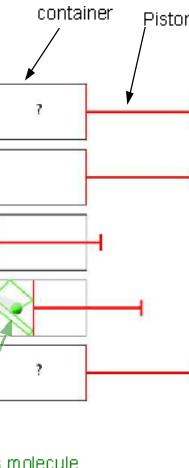

$$N=1$$

$$\frac{V_A}{V_B} = 2$$

Hence

$$W = kT \ln(2) \text{ Work is produced here!}$$

Information is lost here!

Information entropy and physical entropy

Leo Szilárd:

From Law II, taking into account that $W = T\Delta S$

$$W_{\text{produced by piston}} = W_{\text{loss of information}}$$

$$T\Delta S_{\text{inf}} = kT \ln 2$$

$$\Delta S_{\text{1bit}} = k \ln 2$$

Increasing 1 bit of information increases physical entropy by $k \ln 2$

(Landauer 1971, logically irreversible processes, eg. AND-gate)
