Physical Bases of Dental Material Science

Introduction

1

Important informations

- **Tutor:** Zsolt Mártonfalvi, PhD (martonfalvi.zsolt@med.semmelweis-univ.hu)
- Department of Biophysics and Radiation Biology, left elevators, 2nd floor
  Head: Prof. Miklós Kellermayer
- http://biofiz.semmelweis.hu
- e -book (Physical bases of dental material science)
- Exam: written (minimum requirement) test, completed by an oral exam for grades higher then 2

Further readings:

- W.D. Callister: *Materials Science and Engineering*. An Introduction (7th ed.), Wiley&Sons, 2007
- K.J. Anusavice: Phillips' *Science of Dental Materials* (11th ed.), Saunders, 2003
- Damjanovich, Fidy, Szöllősi: *Medical Biophysics*, Medicina, Budapest, 2009

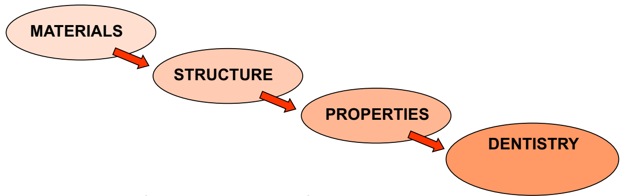
Lectures

1	Atomic interactions, bonds. Multiatomic systems, gases. Interpretation of temperature, Boltzmann-distribution. (Zsolt Mártonfalvi)	11.09.2017
2	Fluids, solids, liquid crystals. (Zsolt Mártonfalvi)	18.09.2017
3	Cohesion, adhesion, interfacial phenomena. Phase, phasediagram, phase transitions. (Zsolt Mártonfalvi)	25.09.2017
4	Crystallisation. Metals, alloys. (Zsolt Mártonfalvi)	02.10.2017
5	Ceramics, polymers, composites. (Zsolt Mártonfalvi)	09.10.2017
6	Mechanical properties of materials 1. Elasticity. (Zsolt Mártonfalvi)	16.10.2017
7	*Lecture cancelled due to national holiday.*	23.10.2017
8	Mechanical properties of materials 2. Plasticity, hardness. (Károly Módos)	30.10.2017
9	Mechanical properties of materials 3. Rheological properties, viscoelasticity. (Károly Módos)	06.11.2017
10	Optical, electrical and thermal properties of materials. (Károly Módos)	13.11.2017
11	Comparison of the properties of dental materials based on their structure. (Károly Módos)	20.11.2017
12	Bases of biomechanics. Structure, mechanical and other properties of dental tissues. (Zsolt Mártonfalvi)	27.11.2017
13	Physical bases of implantology. (*Guest lecturer: Attila Szűcs*) (Zsolt Mártonfalvi)	04.12.2017
14	Physical bases of orthodontics. (*guest lecturer: Bálint Nemes*) (Zsolt Mártonfalvi)	11.12.2017

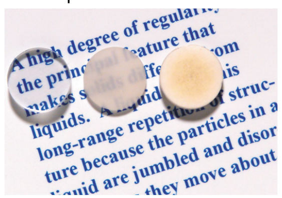
3

How to start? – How to proceed?

The way how the lectures proceed



Example for the importance of structure:



All are Al_2O_3 !

How to study?

Preferably prior to lecture!

- download handout, read it
- read book chapter
- question marks (?)

1. introduction — 0,5-1 h

2. processing → understanding — 3-4 h

- definitions, laws, quantities precisely
- practical applications

3. repetition, memorizing — 0,5-1 h

Communicate!

- lecture: take notes! – make questions
- read again the book chapter, understanding, remarks
- do the calculations

5

Physical Bases of Dental Material Science 1.

Structure of matter

Atomic interaction, multiatomic sytem - gases

E-book chapters: 1, 2, 3

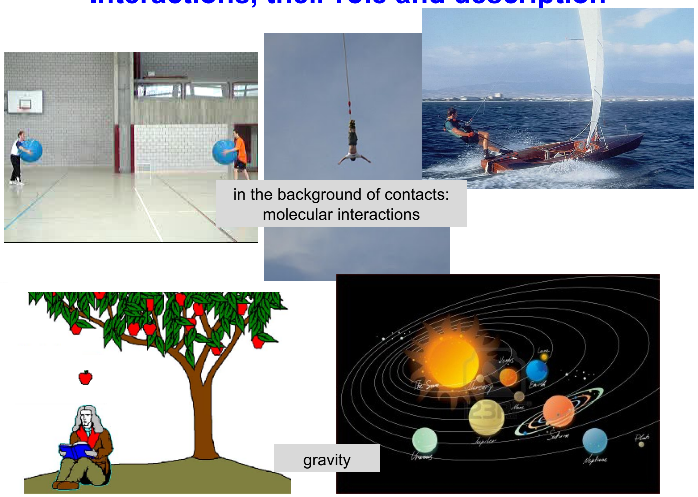
Highlights:

- Interactions
- Energy curve of atomic and molecular interactions
- A Interpretation of temperutre
- Boltzmann-distribution

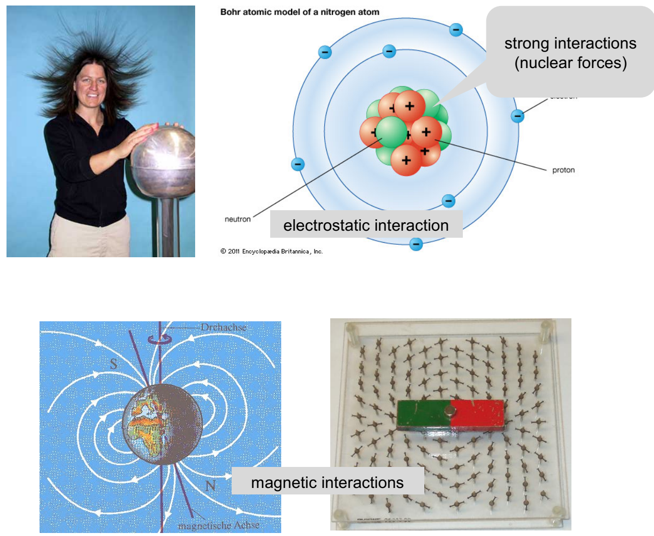
Problems: Chapter 1, 2, 3.: 1, 3, 9, 10, 13, 17, 19

6

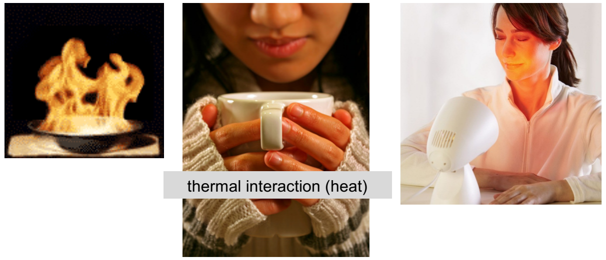
Interactions, their role and description



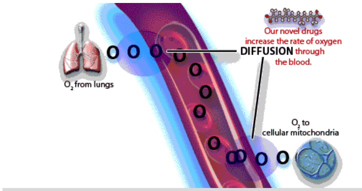
7



8



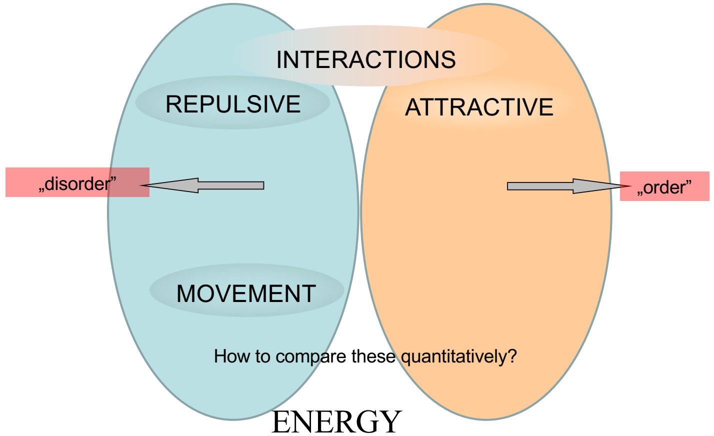
thermal interaction (heat)



chemical, biological interactions

9

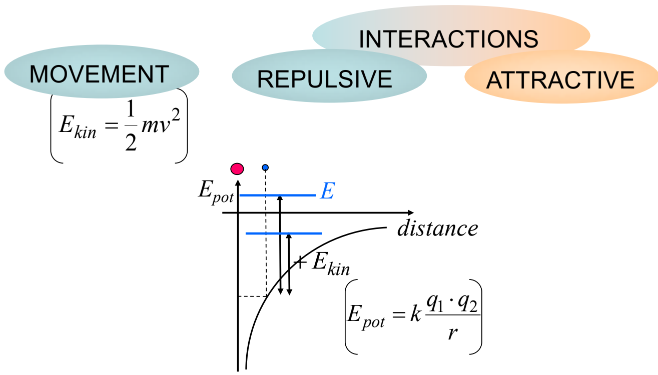
How bodies are formed in general:



ENERGY

Energy of an interaction (potential energy), kinetic energy

10



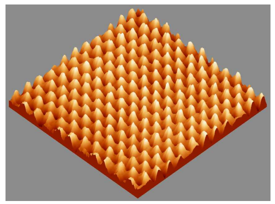
$E = E_{pot} + E_{kin} < 0$ ⟹ bound e⁻

$E = E_{pot} + E_{kin} > 0$ ⟹ free e⁻

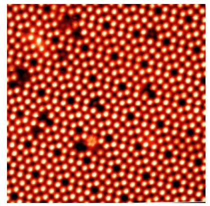
11

All matter is composed of atoms

- Democritus B.C. 5th century
- Dalton's atomic theory 1803
- Rutherford 1911
- Bohr 1913



C atoms in crystal lattice
no vacancies

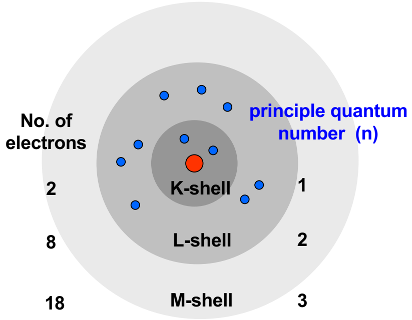


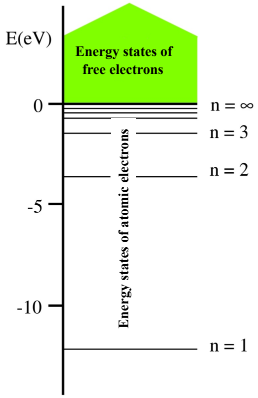
Si crystal with
vacancies

12

Structure of the atom

- Rutherford experiment, Spectroscopy (Bohr)
- Discrete energy levels
- Energy minimum
- Pauli-principle

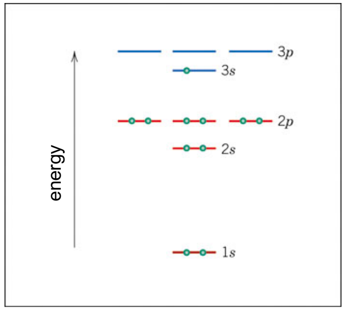




Energy unit: elektronvolt (eV), 1 eV = $1{,}6 \cdot 10^{-19}$ J

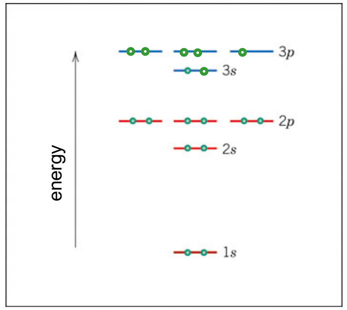
Electron configuration:

i.e. $_{11}$Na atom



$1s^2 2s^2 2p^6 3s^1$

i.e. $_{17}$Cl atom

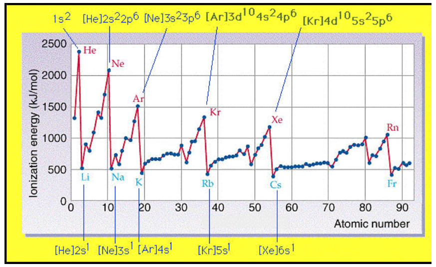


$1s^2 2s^2 2p^6 3s^2 3p^5$

Electronegativity

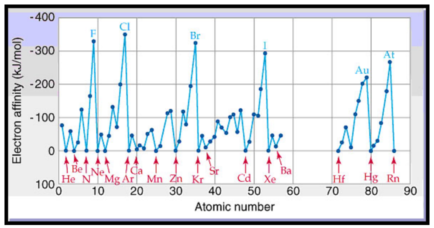
Ionization energy(*I*):

The amount of energy that is necessary to remove the most loosely bound electron from an atom **(eV/atom; kJ/mol)**



Electronaffinity (*A*):

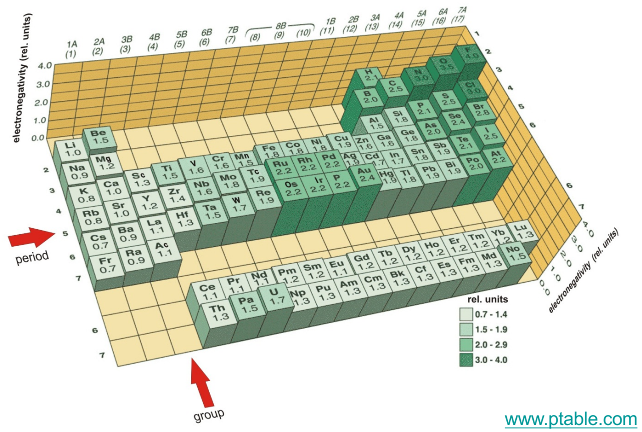
The amount of energy released when an electron is added to an atom **(eV/atom; kJ/mol)**



Electronegativity (EN):

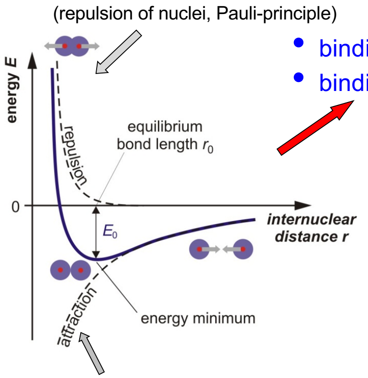
$$EN = I + |A|$$

Pauling-scale:

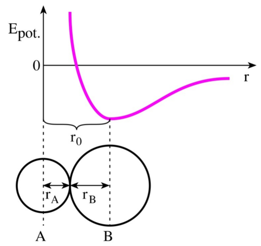


www.ptable.com

Atomic interactions



- binding distance (r_0) ≈ 0,1 nm (1 Å)
- binding energy (E_0) ≈ 2-1000 kJ/mol

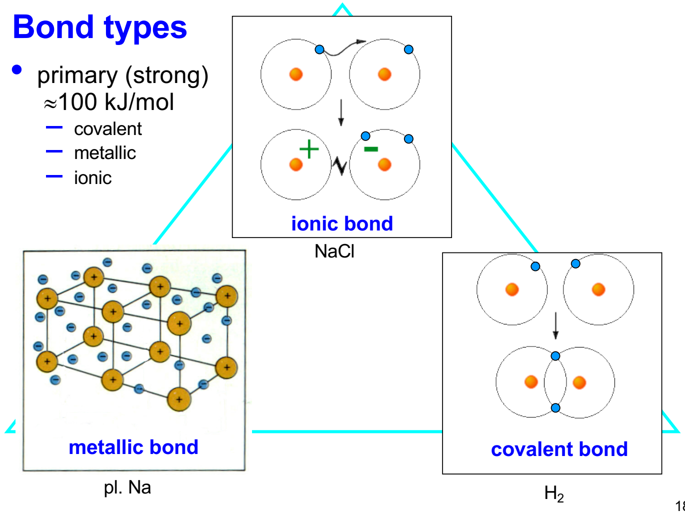


- shared electron orbitals
- electrostatic interactions (ion-ion, ion-dipole, dipole-dipole)

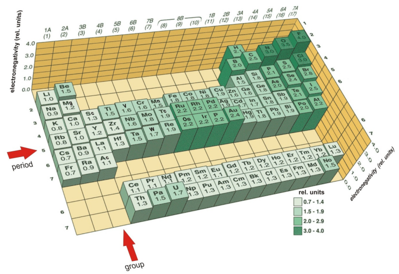
17

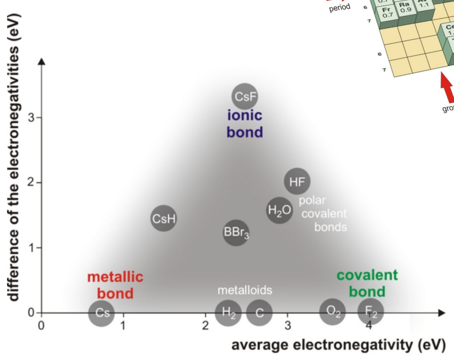
Bond types

- primary (strong) ≈100 kJ/mol
  - covalent
  - metallic
  - ionic



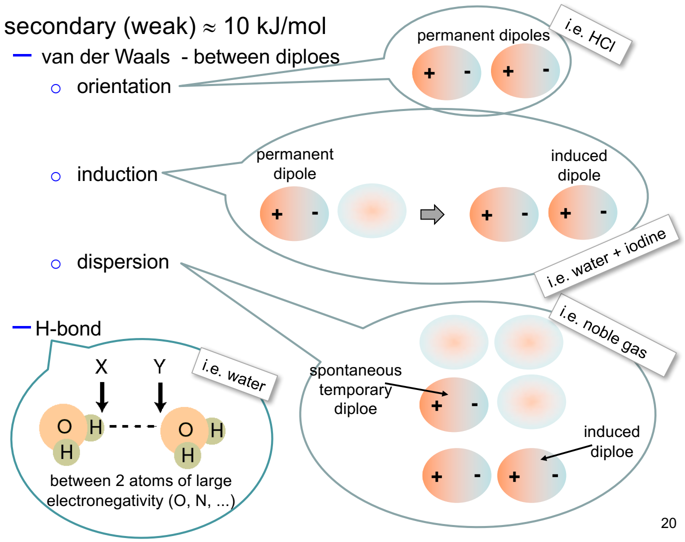
18





19

- secondary (weak) ≈ 10 kJ/mol
  - van der Waals - between diploes
    - orientation
    - induction
    - dispersion
  - H-bond

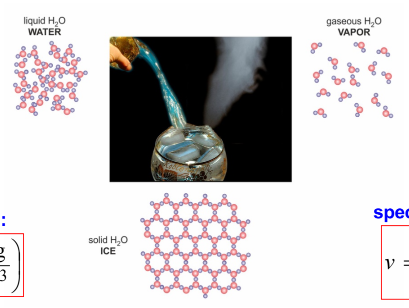


20

States of matter - Phases

T

	solid	liquid	gas
definite volume	+	+	-
stable shape	+	-	-



density (ρ):

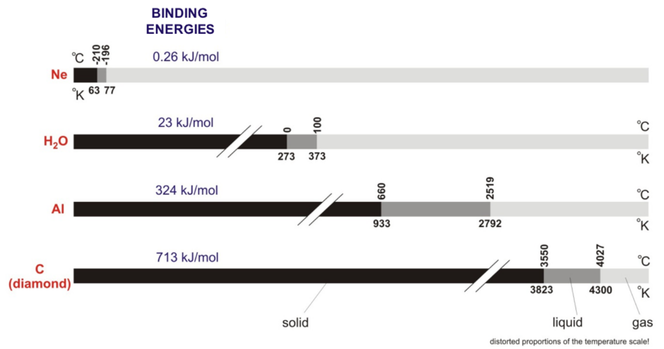
$$\rho = \frac{m}{V} \left(\frac{\text{kg}}{\text{m}^3}\right)$$

specific volume (v):

$$v = \frac{1}{\rho} \left(\frac{\text{m}^3}{\text{kg}}\right)$$

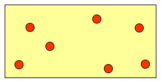
21

attraction ⟺ **repulsion + movement** ***T***



22

Gases



Macroscopic description:

- No definite volume or shape
- isotropic

p, V, n, T

$$pV = nRT$$

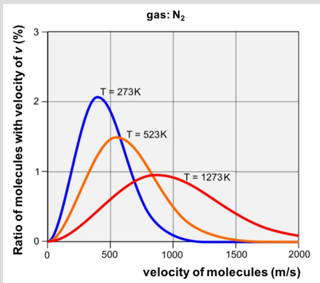
(ideal gas)

Microscopic description:

- random
- movement in many degrees of freedom

$$\frac{1}{2} m\overline{v^2} = \frac{3}{2} kT$$

Maxwell-Boltzmann- distribution



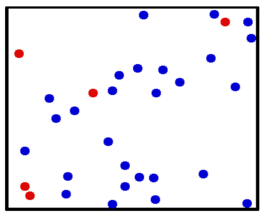
23

Temperature

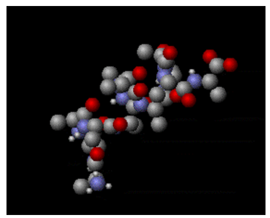
Temperature is a parameter proportional to the average kinetic energy available for each degree of freedom.

$$T(K) = t(°C) + 273$$

hot and **cold** gas particles



macromolecule



24

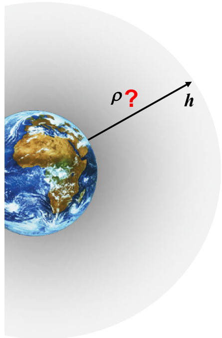
Gas in a force field – gravitation

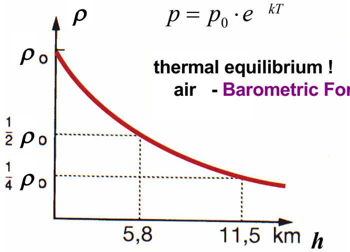
Example: density (ρ) of air ***changes*** in function of the potential energy

$$\rho = \rho_0 . e^{-\frac{mgh}{kT}}$$

$$p = const * \rho$$

$$p = p_0 \cdot e^{-\frac{mgh}{kT}}$$





thermal equilibrium !

air - Barometric Formula

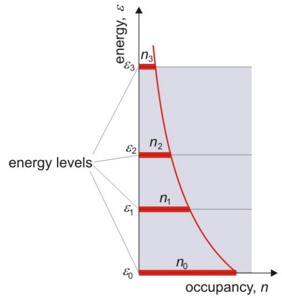
less and less particles are found (in the same volume) at higher potential energy (at higher altitudes)

Boltzmann-distribution

The Boltzmann distribution describes the distribution of the particles between energy levels in a force field in case of thermal equilibrium.

n_i — ε_i, n_0 — ε_0, $\Delta\varepsilon$

$$n_i = n_0 \cdot e^{-\frac{\varepsilon_i - \varepsilon_0}{kT}}$$



$$n_i = n_0 \cdot e^{-\frac{\Delta\varepsilon}{kT}} = n_0 \cdot e^{-\frac{\Delta E}{RT}}$$

$$\Delta E = \Delta\varepsilon \cdot N_A$$

$$R = k \cdot N_A$$

26

Examples for Boltzmann-distribution:

- barometric formula
- thermal emission of electrons from metals
- Nernst-equation
- rate of chemical reactions
- conductivity of semiconductors
- ...

27
